Group project delivery

Sicheng Zhan

Department of Civil Engineering
szhan@hku.hk

Project overview

Project goal: In groups of $\sim$ 5 people, identify a sustainability-related campus improvement opportunity and develop a tender for the proposed project.

Roles and tasks: Project coordinator, Scope & Sustainability, Procurement & Tendering, Contract & Commercial, Quality & Delivery
Deliverables: A concise tender package and a group presentation in Week 6

Assessment

The project is assessed on the quality and coherence of your project-management and procurement decisions, **NOT** on advanced engineering design.

Could HKU Estates Office use your tender to obtain and evaluate credible bids for this retrofit project?

Presentation format and focus

12 minutes presentation + 3 minutes Q&A

Your presentation is **NOT** an oral version of the full report.

Present as a client-side project team briefing an Estates Office project approval panel.

The objective is to convince the panel that the proposed retrofit is **worthwhile** and that your key project and tendering decisions are **coherent, practical, and suitable for implementation**.

- Use selected examples from the tender package to support your reasoning

Proper level of detail

- **Project need, value, and feasibility**
  - What problem are you addressing, why is it worthwhile, and is it realistic?
- **Scope and key requirements**
  - What is included/excluded, what constraints must be respected, and what outcomes or performance does HKU require?
- **Procurement and tendering strategy**
  - How will the project be procured, and why is this approach appropriate?
- **Commercial, contract, and risk arrangements**
  - How will the work be priced, what are the key responsibilities, and how are major risks allocated?
- **Tenderer qualification and evaluation**
  - Who is eligible to bid, what must they demonstrate, and how will they be compared?
- **Quality, safety, and handover**
  - How will HKU verify that the works are safely delivered, tested, accepted, and handed over satisfactorily?

Participation and Q&A

All members should **understand the whole project**, not only their assigned section.

During Q&A:

- The class is encouraged to raise questions
- Questions may be directed to **any group member**
- Answers should be concise and specific
- Use the written report or backup slides if needed
- It is acceptable to say where an assumption has been made

Presentation assessment

The presentation will be assessed on:

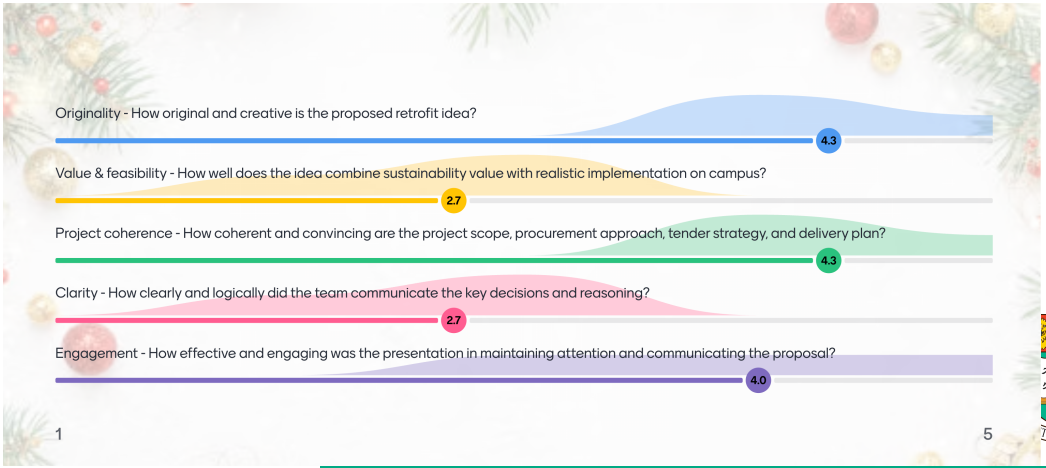

- Clarity of project explanation
- Quality of reasoning behind key decisions
- Coherence between project scope, procurement, contract, risk, and quality
- Effective use of selected examples
- Ability to answer questions
- Professional communication as a client-side project team

The presentation mark is separate from the completeness of the written report.

Peer-scored awards

Best Overall Proposal/Most Innovative Retrofit Idea/Best Presentation

Logistics

- Note the presentation order
  - **2,9,1,8,3,4,7,6,5**
- Upload or download slides before class
- Time limit will be kept
- Arrive on time and DO NOT leave early
- Submit final slides and report before the deadline (**Oct 18**)
